CAMELLIA RETICULATA

# *Lindo Nurseries*

PRICE *1947* LIST

Lindo Nurseries have specialized in growing and developing Camellias for over thirty-nine years. Starting with scarcely a dozen varieties we now have over five hundred and are distributing them throughout the Nation wherever climatic and soil conditions are suitable.

# CULTURAL HINTS

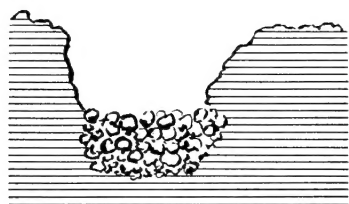

## EXPOSURES

Contrary to a general conception, Camellias do not thrive best in full shade. In such a location you get a lovely green foliage, but very few flowers. Nearly everywhere, they will

stand morning sun, and in many localities afternoon sun. Some varieties will tolerate more sunshine than others. The safe rule to follow is to give them as much sun as they can stand without burning the foliage. Sunshine produces more flowers.

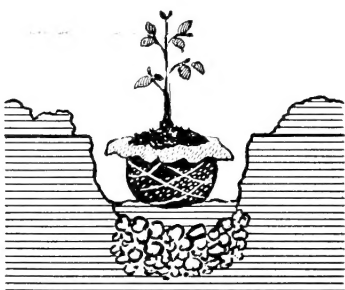

## SOIL

Since the feeder roots of Camellias are very fine and hair-like the soil should be loose and friable to give the roots an opportunity to forage. A mixture of  $\frac{1}{3}$  loam,  $\frac{1}{3}$  leaf mold, and  $\frac{1}{3}$  peat moss gives just about the right tilth to the soil as well as an acid reaction. Good drainage is

absolutely necessary. If your soil is heavy and water retentive, place some gravel in the bottom of the hole to drain away the excess water quickly.

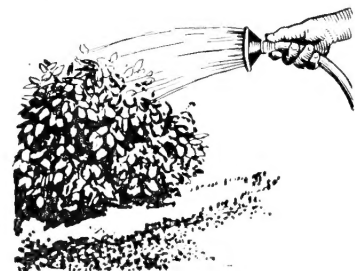

## PLANTING

Dig a hole at least 1 foot larger in diameter than the root ball of the Camellia. Fill this hole with the soil mixture mentioned above. Firm the soil in the bottom of the hole so that it will not settle after the Camellia has been planted. Place the Camellias so that the top of the root ball is even with the surrounding soil; fill

around the sides with soil, leaving a basin around the plant for water. Never plant a Camellia deeper than it was growing at the nursery.

## WATERING

Water Camellias immediately after planting, giving them a good soaking. Thereafter, keep the soil uniformly damp—not soggy. Never permit the soil to dry out and cake. The feeder roots are in the top few inches of soil and they cannot take up nourishment out of dry soil. All plant nourishment is absorbed in liquid

form. Water the plants overhead, as they never mildew and washing the foliage is very beneficial.

# NOMENCLATURE

The nomenclature of Camellias has been confused for over a hundred years. Oft times, the same Camellia can be bought in different nurseries under three to six different names. The nomenclature varies considerably between the deep South and the Pacific Coast. We are exceedingly careful in the labeling of our stock and we try to the best of our ability to give each plant its correct name. Because of this confusion we cannot guarantee that any plants you receive from us will be identical to those known to you under a given name and bought elsewhere. We do guarantee them to fit the descriptions carried in our catalog, and if you purchase all of your Camellias from us you should be able to avoid any duplications in your collection.

## FERTILIZING

You should use an acid reacting fertilizer, sold by most nurseries, and begin applying it in the spring just as soon as the Camellia is through blooming, as new growth is about to begin. Loosen the top half inch of soil with a hand cultivator as illustrated below, apply two handfuls of fertilizer around a small plant, more around larger bushes. Water immediately. Repeat applications once each month through July.

## CULTIVATING

Camellias are top feeders and should never be cultivated deeply. It is well to keep the surface of the soil loose so that water will permeate and not run off. This is especially desirable after fertilizing. Use a hand cultivator and do not cultivate deeper than about  $\frac{1}{2}$  inch—just enough to prevent a top crust from forming. Weeds should be pulled by hand from immediately around the plant.

Camellias very often set more buds than it is desirable for a plant to mature. To leave all of these buds on a plant causes it to exhaust its energy maturing a large crop of sometimes inferior flowers. By proper disbudding and fertilizing, you can appreciably increase the size of the blooms. Leave but two buds to each terminal and be careful not to injure the sharply pointed leaf bud in removing the flower buds.

## DISBUDDING

## PICKING

A Camellia bush can be ruined by improper removal of the flowers. Flowers wanted for floating in a shallow bowl should be twisted off and leaves from other parts of the plant inserted where required in the arrangement. Those for corsages should be cut with shears or sharp knife, taking only two or three leaves with the flowers. Make the cut  $\frac{1}{4}$  inch above a leaf on the new wood which shows a dormant bud in the leaf axil.

## PLANTING SEASON

Under favorable conditions Camellias can be planted during almost any month of the year if bought in containers and the root system is not disturbed in transplanting. Balled plants are taken up in the nursery during the winter and early spring when the plants are dormant, and should be set out in the garden at that time. In our nursery we normally ball Camellias from the first of November to the middle of April—depending upon weather conditions.

## BALLS OR CONTAINERS

Some Camellia buyers prefer to buy plants grown in containers and to accommodate this trade we grow a certain amount of stock in gallon cans. By far the lion's share of our stock, however, is grown in the ground under lath, and must be balled before shipment. This applies especially to the larger sizes. Because of the light friable condition of our soil it fuses easily with the soil in the new location to which our plants are moved when sold. This adds much to the ease with which our plants grow and become established in their new homes. We pride ourselves on the vigor of our plants.

## COLLECTORS OF CAMELLIAS

For people collecting Camellias and those interested in a large number of varieties we have prepared a mimeographed list covering most of the varieties in our collection.

We invite your further inquiries and will be very pleased to send you the additional list mentioned above.

Where our stock is very limited we will take orders and graft plants for customers for future delivery. Small grafted plants can be delivered next Spring and large grafted plants on five and six year understock can be delivered next Fall, 1947.

### The Queen of Camellias

We have a limited supply of these exceptionally rare and beautiful Camellias.

It is impossible to describe them. Their sensational beauty is creating a demand among Camellia lovers that it has been impossible to fully meet.

We will be glad to send you true-to-life color pictures upon request.

These plants are grafted on large seven and eight year old plants giving them the benefit of a very large root system.

Because of material shortages and labor scarcity this simple price list will replace our usually more elaborate catalog this year.

There is, however, no scarcity of plants in our nursery nor are the types or varieties limited. The fact is, we are offering some especially rare and choice varieties in Camellias and, while the early demand indicates a very heavy drain upon our stocks, we are still making complete delivery on all orders. But should it occur that we are unable to fill your order completely we will, as in the past, substitute the next larger size or omit the item and make you a refund. We do not substitute varieties without specific authorization, and then we prefer that you indicate a second choice.

---

---

Prices in this list are f.o.b. Chico, California. All transportation charges are to be paid by purchaser. We exercise great care to ship by the cheapest and best routes and to secure the lowest rates on all shipments. Residents of California will please enclose 2½% State Sales Tax.

**Terms.** Cash with order, except for customers having established charge accounts.

**WARRANTY.** Our varieties are guaranteed true to name and description under which they are sold. While there is great confusion in nomenclature and many varieties are sold under various synonyms, we are constantly on the alert for these synonyms and sell our plants under the names most generally accepted.
